TECH BRIEF

MAXIframe[®] 202 BRACKET

The Judah MAXIframe[®] 202 Sill/Header Bracket has been modified to ensure there is no overhang of the section that could interfere with the linings, whilst still maintaining security of the MAXIjamb[®] Sill/Header section during installation. >>

MAXIframe[®] 202 BRACKET

The new 202 bracket design means one fixing flange is visible and the other invisible.

Once the bracket is installed against the web of the MAXIjamb[®] using 4/#10 wafer head tek screws, the MAXIjamb[®] section has to be 'rolled' into place as illustrated (*figures 1–3*).

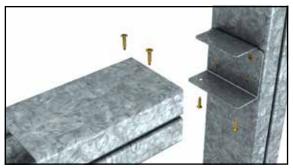

FIGURE 1

FIGURE 2

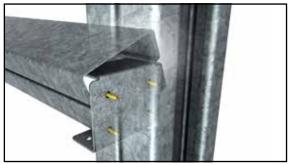

FIGURE 3

The exposed flange has two pre-drilled holes for fixing to the MAXIjamb[®], whilst the flange that is now inside the MAXIjamb[®] should be secured by fixing the screws through the top, 4" in from the inside jamb face and 4" from the outer edge of the section (figure 4).

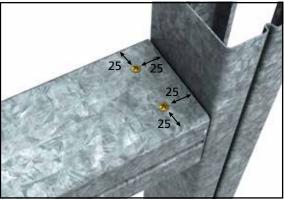

FIGURE 4

This new bracket is fixed to the MAXIJamb[®] with the shorter internal flange facing the opening.

For example: when securing the sill member the short flange faces up and when securing the header, it faces down. (For your convenience, the Judah 202 Sill/Header Bracket is stamped accordingly on its inner face.)

Once finally secured into place, the outer face of the 202 Sill/Header Bracket will align neatly with the face of the MAXIJamb[®] section, both internally and externally.
